geWEs, lambde B DNA from total DNA of H9 cells producing HIV-1 (MN) in this close was obtained lambda MN-PH1; twas smokoned in M1mph and fall purposed the military and the DNA sequence of the entire close was obtained.

All seths of The sequence represent bases which are likely and the specification. The mails set desired to the entry bases which are much sequence that recombinant production of the env protein was deduced that teconomians production of the env protein was sequence 9739 BP, 3457 A, 1774 C, 2313 G, 2191 T;

concider a process (see W1239) that acts as a growth inhibitor of breast and ownstin cancer cells. Days ecceling the BRCAL process can thus be used in gene therapy methods for the treatment of breast and ownstin cancers. Purified BRCAL protects can also concern these cancers and, since it is secreted, can be used to treat these cancers and, since it is secreted, can be used to identify the BRCAL receptor of olderity BRCAL protects and since it is served to use in breast and protein cancer treatment. The BRCAL gene (see 198840) and BRCAL protein (see W12386) have also been characterised. Methods are claimed for the isolation of BRCAL or BRCAL receptors, and for the isolation of BRCAL and BRCAL proceedings or sporadio) ownside concern using BRCAL and BRCAL proceptors and concern concern using BRCAL and BRCAL proteins and special contract cancers using BRCAL and BRCAL proteins and sequence 11283 BP. 4068 A; 1971 C; 2091 C; 3135 T; 888888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MORF-2009), the encoded protein shows 46.84
ferenciage identity to GTP-binding protein
ferenciage identity to GTP-binding protein
from 1.307
//Label 1.8012

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             *resq= 0.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /label = WOO12
/note= 'Previously identified as MORF-20080, the
mored profesh shows all 50 percentage
identity to the ribosomal protein 86
admitty to the ribosomal protein 86
colification protein (rimk) from Escherichia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    //abel= MGD15

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7/Abel #0023

 TOXOPLEAR REFF.

TOXOPLEAR REFF.

TOXOPLEAR THE STATE ACHFORDER WERE GROWN IN Human forestky fisher in third was constructed by E.L. Wen, Cambridge Diversity. GDNs we synthesized from polyA RNs by oligo d(T) priming and directionally closed finto the GOSEL to MOSE after of the Lamba Zapil wester using the ZAP-GDNs synthesize kit (Struttgens), NARNSTO, the library contains a mail precentage of GDNs derived them human host cells.
         can be obtained from Jim Ajioka (jwaemole.bio.cam.ac.uk)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 4 W28677 615 bp mRNA EST 09-NAY-1996 LOCTO 50b1 Human retina cDNA randomly primed sublibrary Nomo sapiens ACCESSION W2867, MRNA sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cloning_method: total mRNA was oligo-(dT) primed and directionally cloned 5' -> 3' into the HindIII -> NotI sites of the lafmid BA vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             one library from B. Soares, Psychiatry Dept. Columbia University

                                                                                                                                                   individually tagged normalized libraries constructed from 8, 12 and 18 day embryo. The tags is a string of 3-5 nucleotides present between the Not 1 site and the oligo-off rack which allows definitioned in library of crists of a close within the mixture. The subtracted of library (UT-R-12) was constructed as follows: FOR amplified cDNA inserts from a pool of UT-R-20 closes from which 3 '83Ts had ben derived was used as dariver in a hybridaration with the UT-R-20 library in the form of single-extended cutcles. The remaining single-stranded circles (abbracted library) was purified by hydroxypatite column chomodography, converted to bacteria (Life Technologies) to generate the UT-R-21 library. This procedure has been previously described (S00aldo, Lennon and Soares, Genome Research 6: 791-806, 1898)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      physycis Metazoa; Chordata; Vertebrata; Mammalla; Butheria;
